

18. (ONCE AMENDED) A liquid crystal display in accordance with claim 14, wherein said first back face is provided with a great number of projection rows running approximately at right angles with respect to said first incidence end face, each of said projection rows including a pair of slopes.

19. (ONCE AMENDED) A liquid crystal display in accordance with claim 15, wherein said first back face is provided with a great number of projection rows running approximately at right angles with respect to said first incidence end face, each of said projection rows including a pair of slopes.

A1
Cont 20. (ONCE AMENDED) A liquid crystal display in accordance with claim 16, wherein said first back face is provided with a great number of projection rows running approximately at right angles with respect to said first incidence end face, each of said projection rows including a pair of slopes.

Sub
B2 21. (ONCE AMENDED) A liquid crystal display in accordance with claim 13, wherein said light control member is provided with a great number of slopes providing inner reflection surfaces to modify a directivity of illumination output light so that illumination output light originated from any one of said first and second primary light sources is directed to a frontal direction with respect to said second emission face.

22. (ONCE AMENDED) A liquid crystal display in accordance with claim 21, wherein said light control member has an inner face provided with a great number of projection rows running approximately parallel with respect to said second incidence end face, each of said projection rows including a pair of slopes.

Please **ADD** new claim 25 in accordance with the following:

Sub
B3
K2

25. (NEW) A liquid crystal display comprising:
a liquid crystal display panel;
a light control member; and
a first light source to backlight the liquid crystal display panel, said first light source,
comprising:
a first guide plate
a second light source next to the first guide plate,
a second guide plate laminated to said first guide plate,
a third light source next to the second guide plate, and
a driving circuit to drive the second light source and the third light source,
said first guide plate having a first emission face, a first back face and a first incidence
end face,
said second guide plate having a second emission face, a second back face extending
along said first emission face and a second incidence end face,
said first incidence end face and said second incidence end face being opposite to each
other across said first and second guide plates,
said light control member being disposed along said second emission face to control a
directivity of output light.

REMARKS

INTRODUCTION:

In accordance with the foregoing, claims 17-22 have been amended and new claim 25
